SMI releases iTrend “mobile alert” application for iPhone and iPad

SMI has developed an iTrend® application for mobile devices. This application, called “mobile alert” or mAlert™, provides iTrend users with real-time alerts anywhere within an accessible cellular or wi-fi network. The first version of mAlert has been released for Apple iPhone, iPod Touch, and iPad devices for iTrend Pro users to view and manage alerts on-the-go. SMI intends to make the application available for other mobile devices in future releases.
